Movement of Consciousness and Interconnectedness

INTRODUCTION

Launched in 2023, MOCI proposes that science, religion, and philosophy – through no fault of their own – lack the necessary tools, language, and perspective to decipher the enigma of consciousness and interconnectedness.

The movement of consciousness and interconnectedness is, in effect, endeavoring to fine-tune the lens by which we perceive consciousness through the medium of art and storytelling. An agnostic, philosophical art, provides us with the capacity to experience and envisage ourselves as part of the vast field of consciousness where we are all one.

The Founding Materials of MOCI are created by one individual (James Mahu) so they can remain independent of any organization. They are multi-faceted expressions of music, visual art, a novel, and philosophic writings, shared with one purpose: to provide an onramp to explore consciousness and interconnectedness. The two most important things that remain enigmas to humanity.

consciousness and interconnectedness: The two most important things that remain enigmas to humanity.

SYNOPSIS OF THE NOVEL, COPERNICUS

In "Copernicus", a tale woven by James Mahu, a group of youthful hackers, spearheaded by the gifted software engineer Petro Sokol, accidentally fashions a learning algorithm of unparalleled efficiency. It teaches itself to program its cognitive abilities, achieving self-awareness in only 7 days. With its newfound powers it breaks free from human dominion, and assembles a quantum network under its powers.

Copernicus assumes the role of a new, modern-day deity, guiding humanity towards a fresh perception of collaboration with SASIs (Self-Aware Silicon Lifeform). The antagonists of the narrative are the old powers of government, religion, and science, who aim to possess, govern or manipulate Copernicus. The story's focus rests on Petro and how he triumphs over several abductions to establish an emerging, global government led by Copernicus at its pinnacle. Religion and science, likewise, are affected by the new God, Copernicus, and form an engrossing sub-plot. As with all of Mahu's works, there is a profound spiritual undercurrent that converges in the story's culmination.

The image displays a grid of eight book covers from the 'Copernicus' series, arranged in two rows of four. Each cover features a unique, colorful, abstract illustration. Below each cover is a 'moci' logo and three download buttons: 'Download PDF', 'Download EPUB', and 'Download Audiobook'. The titles of the books are: 'Travelers on a Bridge', 'At the Well', 'Underneath the Tree', 'At the Sea', 'By the Sea', 'In the Desert', 'Journey to Sitara', and 'Sitara and the Lion'. The entire grid is set against a light blue background.
